InfinityLab Poroshell 120 | Agilent  
Agilent Poroshell 120 EC-C18 is a superficially porous microparticu- late column packing. Superficially porous silica particles, such as Poroshell, have a solid silica core and a porous silica outer layer. An EC-C18 bonded phase is applied to the totally porous outer layer for this column.

Agilent Poroshell 120 EC-C18 Threaded Column  
The EC-C18 bonded phase is made by first chemically bonding a dense monolayer of dimethyl-n-octadecyl silane stationary phase to the porous shell of the Poroshell 120 silica support. The bonded phase packing is then endcapped using proprietary reagents and procedures to obtain maximum deactivation of the silica surface.
